

CUSTOMER:

The Franconian Sausage Company

BACKGROUND:

The meter on site was not sufficient to handle the demand of the increasing energy usage.

CHALLENGE:

To upgrade the electricity supply, install a Half Hourly Meter and enable customer access to their energy data through an online reporting facility.

RESULTS:

C.E.S supported the company throughout the project making sure it was managed efficiently and on time. This was achieved by intensive coordination of the onsite building works, distribution operator and meter engineers.

Online access to energy data has become an eye opener for The Franconian Sausage Company, allowing the customer to keep track of their daily energy usage and expenditure.

'Building Occupancy Energy Usage' report has highlighted which areas are contributing to energy waste and during which periods. Understanding what was causing the spikes in consumption has enabled The Franconian Sausage Company to control and target those areas of energy waste and reduce them.
